

## Autumn Hawkbit

**Autumn Hawkbit (*Ceontodon autumnalis*) have loose clusters and normally bloom from July to October. The plant grows one single wildflower per stem, each around 3cm in diameter and at a height of 10-40cm.**

**This species is common in late summer and throughout the autumn and can be found in a wide variety of habitats. It is capable of growing on sites which has a high disturbance level such as those used for cutting and grazing. It requires a relatively fertile soil to be able to grow in high numbers.**

**This wildflower is perfect for pollinators.**

**Sowing Time: Spring**
