

Figwort

Figwort (*Scrophularia* sp) grows to a height of 30-100cm. Flowering time is June through to August. The flowers are up to 1cm long and the upper lip has red/brown lobes whereas the lower lip is greenish. Leaves are up to 13cm long and are oval and toothed.

Figwort is native to Europe and needs moist, well drained soils. It should be planted in a shaded and protected area. This is a factor why they will be found in woodlands, hedgerows and other shaded areas.

Sowing Time: Spring/Autumn
