

Grass Vetchling

Grass Vetchling (Lathyrus nissolia) is a tall, erect annual with an angled stem reaching a height of 90cm. This is a member of the pea family with long narrow leaves. The crimson pink flowers are solitarily or in pairs, flowering from May to July.

Grass Vetchling is a native annual of open and often disturbed grasslands particularly on chalk and clay soils. Habitats include grassy banks, roadside verges, woodlands and coastal grasslands.

Sowing Time: Spring/Autumn
